

PREMIER FORD INC.

Website Audit & Modernization Roadmap

Live audit of premierfordinc.com
Desktop and inventory experience

August 26, 2026

46/100	4-6 years	293
Modernization score	Estimated UX generation gap	New vehicles observed

FUNCTIONAL INVENTORY. OUTDATED CUSTOMER EXPERIENCE.

Executive summary

Premier Ford's inventory is active and current, but the customer-facing experience is built on an aging dealership template. The website is not abandoned: it lists 2026 vehicles and the inventory feed is actively changing. The presentation, content system and conversion flow have not kept pace.

The highest-risk issue is inconsistent contact information. The homepage and inventory page display different sales, service and parts phone numbers. This can confuse customers, weaken campaign attribution and send leads through the wrong routing setup.

The site also suffers from crowded navigation, repetitive SEO copy, weak visual hierarchy, accessibility gaps, template leftovers, inconsistent headings and excessive front-end complexity. A focused refresh can improve it substantially without replacing the inventory provider.

Area	Score	Assessment
Inventory freshness	85/100	Active 2026 inventory; 293 new vehicles observed.
Content freshness	48/100	Latest clearly dated editorial content found: August 12, 2025.
Visual design	42/100	Older dealer template with dense navigation and limited differentiation.
Mobile readiness	55/100	Responsive components exist; density and long content create friction.
Conversion UX	45/100	Core actions exist, but CTA and contact routing are inconsistent.
Accessibility	44/100	Skip link exists; missing alt text and heading/control issues remain.
SEO/content quality	52/100	Useful local coverage weakened by duplication and errors.
Front-end efficiency	30/100	178 homepage scripts and 78 stylesheets observed.

How out of date is it?

The experience appears one major design generation behind current automotive retail standards - approximately 4-6 years behind in UX presentation. This assessment concerns the experience, not the exact launch date or inventory data.

Critical finding 1: conflicting phone numbers

The live homepage and inventory page displayed different department numbers.

Area	Score	Assessment
Homepage	Sales: 718-677-0619	Service: 718-677-0619 Parts: 718-859-5210
Inventory page	Sales: 718-514-6343	Service: 718-814-6286 Parts: 718-213-4747

Business impact

- Customer confusion and missed calls.
- Inaccurate marketing attribution and call reporting.
- Potential inconsistency with local-search listings and structured data.
- Different departments may receive calls intended for another team.

Recommended solution

Establish one canonical number for each department. If the differences are intentional tracking numbers, use one controlled call-tracking platform with consistent routing, session-level replacement and analytics labels. Confirm that visible numbers, click-to-call links and structured data agree on every page.

Immediate verification checklist

- Call every displayed number from a test phone.
- Confirm destination, greeting, recording notice and business hours.
- Compare website values with Google Business Profiles and CRM routing.
- Assign a documented owner for future contact-detail changes.

UX and content findings

2. Navigation is crowded and template-driven

The menu mixes inventory, EV, commercial, finance, service and company information. Several primary items behave as menu triggers rather than useful destinations. On smaller screens, this hierarchy creates unnecessary scanning.

Use five clear groups: Shop; Sell or Trade; Finance; Service & Parts; About. Keep Search Inventory, Schedule Service and Call as persistent high-priority actions.

3. The homepage lacks a decisive value proposition

The page opens with a generic welcome message and filters, but does not immediately explain why a Brooklyn buyer should choose Premier Ford.

Recommended hero message

Find your Ford in Brooklyn.

Transparent pricing, fast financing and service you can schedule online.

Primary actions: Shop New | Shop Used | Value My Trade

4. Repetitive and awkward copy

- 'Welcome to Premier Ford Inc of Brooklyn NY' appears repeatedly.
- Headings such as 'Our Premier Financing' and 'Our Premier Partnership' appear disconnected from useful content.
- The homepage contains 'Premier Ford of Inc.'
- The inventory page contains the typo 'Booklyn Ford dealership.'

Replace the long SEO-style homepage body with 400-700 words organized around buyer questions, dealership differentiators, service capabilities and local trust.

Inventory and conversion findings

5. Inventory results are information-heavy

The audited inventory state showed 293 vehicles and many useful filters. However, cards expose long stacks of conditional incentives, making the actual pricing story difficult to scan.

Simplify every vehicle card to four primary numbers

- MSRP
- Dealer discount
- Available conditional incentives
- Estimated selling price

Move eligibility details behind a clear 'See incentives' control. Add payment, availability and delivery-time filters. Keep a sticky compare/save tray available as shoppers browse.

Lead conversion upgrades

- Use two-step forms: intent first, contact details second.
- Add a persistent mobile action bar: Call, Text, Directions and Schedule.
- Show the expected response time on confirmation pages.
- Pass vehicle, campaign and page source into the CRM.
- Deduplicate leads and preserve consent for text/email follow-up.

Service upgrades

- Make Schedule Service persistent in the header.
- Show appointment availability before requesting full details.
- Explain pickup/delivery and mobile-service eligibility.
- Publish common maintenance prices and current specials.
- Add recall/VIN lookup if supported by Ford systems.

Accessibility and technical findings

6. Accessibility gaps

The homepage had 41 images; 12 lacked alt text during inspection. The inventory page had 14 loaded images in the inspected state; five lacked alt text. At least one broken image was detected on each inspected page state.

Heading structure was noisy, with repeated vehicle headings before the principal homepage content and duplicated content headings. Several inputs did not expose useful labels in the inspected markup.

Target WCAG 2.2 AA

- Add meaningful alternative text.
- Use one visible, descriptive H1 per page.
- Maintain logical H1-H2-H3 nesting.
- Give every form control a programmatic label.
- Repair broken imagery.
- Verify keyboard navigation, focus, contrast and screen-reader announcements.

7. Excessive front-end complexity

The homepage exposed 178 script elements and 78 stylesheets in the audited browser state; the inventory page exposed 153 scripts. These counts do not map one-for-one to network requests, but they strongly indicate template bloat, third-party tags and duplicated integrations.

Performance response

- Audit every analytics, chat, finance and advertising tag.
- Remove scripts without a measured business owner.
- Defer noncritical code until interaction or consent.
- Lazy-load the map and offscreen modules.
- Use AVIF/WebP with explicit image dimensions.
- Budgets: LCP $\leq 2.5s$, INP $\leq 200ms$, CLS ≤ 0.1 at the 75th percentile.

Recommended homepage architecture

1. Utility bar

Address, sales hours, department call actions and language.

2. Compact header

Logo, five navigation groups and inventory search.

3. Hero

Local value proposition plus New, Used and Trade actions.

4. Quick vehicle search

Type, model, payment/price and availability.

5. Current offers

Three concise cards with expiration dates.

6. Featured inventory

Personalized or manually selected vehicles.

7. Why Premier Ford

Transparent pricing, location, commercial expertise and service.

8. Trade-in module

Instant valuation with a short first step.

9. Service module

Schedule service, pickup/delivery and mobile service.

10. Reviews and trust

Verified review score, certifications and community proof.

11. Location and hours

Separate sales/service locations with accurate numbers.

12. Lean footer

Legal, privacy, accessibility, sitemap and contact details.

SEO, trust and measurement

SEO recommendations

- Preserve useful inventory URLs during redesign.
- Fix duplicate and weak headings.
- Consolidate thin or overlapping model/location pages.
- Add unique model guidance, FAQs and Brooklyn ownership information.
- Maintain accurate AutoDealer structured data.
- Keep phones, addresses and hours consistent with Google Business Profiles.
- Publish useful local content monthly instead of generic model summaries.

Trust and compliance

- Put offer expiration and eligibility beside every promotion.
- Keep price disclosures readable on mobile.
- Publish an accessibility statement and remediation contact.
- Align consent behavior across finance, chat, text and analytics.

Measurement targets

Area	Score	Assessment
Inventory to vehicle detail	+15%	Measure search and listing engagement.
Vehicle detail to qualified lead	+20%	Measure high-intent conversion.
Mobile click-to-call	+15%	Measure department-specific calls.
Service completion	+20%	Measure started vs. completed scheduling.
Form abandonment	-25%	Measure each step.
Valid call routing	100%	Test every published number.
Core Web Vitals	75%+	Page templates meeting thresholds.
Critical accessibility defects	0	Before public launch.

Prioritized modernization roadmap

Phase 1 - Immediate repairs | 1-2 weeks

- Resolve phone-number inconsistencies.
- Correct Booklyn, Premier Ford of Inc and duplicated copy.
- Repair broken images and missing critical alt text.
- Confirm CTA destinations and department routing.
- Remove expired offers and verify disclosures.
- Create analytics baselines for calls, forms and inventory engagement.

Phase 2 - Conversion refresh | 3-6 weeks

- Redesign header, navigation and homepage hierarchy.
- Simplify inventory cards and incentive presentation.
- Add persistent mobile actions.
- Shorten lead forms and improve confirmation states.
- Align sales, service, trade and finance funnels.

Phase 3 - Performance and accessibility | 4-8 weeks

- Complete third-party tag audit.
- Optimize image formats and loading.
- Correct headings, labels, focus and contrast.
- Run keyboard and screen-reader testing.
- Monitor field Core Web Vitals by template.

Phase 4 - Platform modernization | 8-14 weeks

- Build a modern presentation layer while retaining live inventory feeds.
- Add saved vehicles, payment search and consistent reservation steps.
- Connect CRM, call tracking and analytics through a documented event model.
- Establish reusable offer, inventory, form and service components.

Recommended implementation approach

Do not begin by replacing the dealership inventory system. Keep inventory, pricing and CRM integrations that are working, and rebuild the presentation and conversion layer around them. This reduces operational risk and improves the highest-value journeys first.

A clean component-based front end with centralized content should control department details, navigation, offers, landing pages and trust content. Inventory and finance providers should connect through supported feeds or APIs instead of duplicating data inside page copy.

First 30 days

- Confirm canonical department contacts and call tracking.
- Repair visible credibility and accessibility defects.
- Approve the new navigation and homepage content model.
- Document analytics events and current conversion baselines.
- Prototype the new inventory card and mobile action bar.

Evidence and limitations

This audit reflects public website states inspected on August 26, 2026. Inventory, promotions, phone replacement and widgets may vary by campaign or session. Conflicting numbers should be confirmed against the dealership's tracking configuration before removal. No private analytics, CRM access, hosting access or vendor contracts were available; conversion and speed impacts are informed assessments rather than internal measurements.
